

## ***“The neutron & its applications: 1982” Proceedings & authors***

Edited by Peter Schofield

*Plenary and Invited Papers from the Conference to mark the 50<sup>th</sup> Anniversary of the Discovery of the Neutron held at Cambridge, UK, 13 – 17 September 1982. This was an extraordinary Conference with many articles of great interest for historians. No less than 6 present or future Nobel Laureates addressed the Conference, as well as many other famous participants.*

Conference Series number 64: The Institute of Physics, Bristol & London.  
Codon IPHSAC 64 1-522: ISSN 0305-2346 No. 64 ISBN 0-85498-155-1  
Published by the Institute of Physics 1982.

### Section 1: Introduction

1-4 The commemorative session, *J. Hendry*

### Section 2: Nuclear physics and astrophysics

- 5-14 Particle properties of the neutron, *N. F. Ramsey*  
15-20 The neutron lifetime, *J. Byrne*  
21-27 The structure of the neutron, *C. H. Llewellyn-Smith*  
29-31 The question of baryon conservation, *M. Goldhaber*  
33- 43 The neutron and the universe, *D. D. Clayton*  
45-50 Neutron stars: the first fifty years, *G. Baym*  
51-56 Neutron superfluidity, *M. Ruderman*  
57-60 Grand unified theories and cosmology, *J. Ellis*  
61-64 Neutrons in the early universe, *R. J. Tayler*  
65-70 Cosmic neutrinos, *G. Steigman*  
71-74 Solar neutrinos, *J. N. Bahcall*  
75-81 Reactor neutrinos, *F. Reines*  
83-88 The role of neutrons in nucleosynthesis in supernovae, *W. A. Fowler*  
89-94 Light element nucleosynthesis, *J. Audouze*  
95-100 The role of the neutron in heavy element nucleosynthesis *J. W. Truran*  
101-104 The transuranium elements, *G. T. Seaborg*  
105-117 Heavy ion fusion and exotic nuclei studies at SHIP, *P. Armbruster*  
119-124 Neutron-induced fission and the structure of the fission barrier,  
*J. E. Lynn*  
125-135 Nuclear reactions caused by neutrons, *A. M. Lane*  
137-142 The neutron optical model, *P. E. Hodgson*  
143-148 Neutron single particle states in nuclei, *E. Friedman*  
149-156 Isotope shifts, *F. Träger*

### Section 3: Neutron optics

- 157-168 Wave properties of the neutron, *C. G. Shull*  
169-176 The present state of neutron interferometry, *H. Rauch*  
177-180 Production and properties of ultracold neutrons, *A. Steyerl*  
181-186 Neutron spin echo, *F. Mezei*

#### Section 4: Neutron scattering

- (a) Condensed matter physics
- 187–192 Neutron diffraction, *G. E. Bacon*
- 193–198 Slow neutron spectroscopy: an historical account over the years 1950-1977, *B. N. Brockhouse*
- 199–214 Neutron scattering and magnetism, *A. R. Mackintosh*
- 215–220 Neutron scattering review – Magnetic studies, *W. C. Koehler*
- 221–226 Linear and non-linear magnetic excitations in perfect and disordered crystals, *W. J. L. Buyers*
- 227–232 Neutron scattering studies of itinerant electron magnets, *Y. Ishikawa*
- 233–238 Magnetism in the actinides: the role of neutron scattering, *G. H. Lander*
- 239–244 Elementary excitations in one-dimensional magnets, *J. Villain*
- 245–250 Neutron scattering and phase transitions, *R. A. Cowley*
- 251–254 Phonons and their interactions, *R. M. Nicklow*
- 255–260 Incommensurate structures, *J. D. Axe*
- 261–266 Liquid helium, *E. C. Svensson*
- (b) Molecular physics
- 267–270 Neutron studies of liquids and dense gases, *P. A. Egelstaff*
- 271–276 The structure and dynamics of ionic solutions, *J. E. Enderby*
- 277–282 Disorder and correlations in molecular and liquid crystals, *A. J. Leadbetter*
- 283–288 Neutron scattering in chemistry, *J. White*
- 289–294 Diffraction measurements on physisorbed films  
*M. Nielsen, J. Bohr, K. Kjaer and J. P. McTague*
- 295–300 Molecular reorientation and tunnelling motions, *S. Clough*
- (c) Materials science
- 301–304 Neutron small angle and diffuse scattering, *W. Schmatz*
- 305–310 Neutron diffraction studies of amorphous solids, *A. C. Wright*
- (d) Polymers
- 311–315 Contribution of neutron scattering experiments to the understanding of conformation and dynamics of polymer molecules, *J. S. Higgins*
- 317–319 Application of neutron scattering to crystalline polymers, *A. Keller*
- 321–328 Neutron scattering of flowing polymers, *R. Oberthür*
- 329–333 Problems involving H and D polymer mixtures, *S. F. Edwards*
- (e) Biology
- 335–346 The contribution of neutron scattering to molecular biology, *H. B. Stuhrmann*
- 347–350 Label triangulation, *R. P. May*
- 351–355 Neutron scattering studies of virus structure, *S. Cusack*
- 357–359 Neutron studies of connective tissue, *A. Miller*
- 361–364 Neutrons and proteins, *B. P. Schoenborn and V. Raghaven*

Section 5: Reactor physics

- 365–370 Physics design methods for pressurized water reactors, *R. L. Hellens*  
371–376 50 years of neutron transport, *N. R. Corngold*  
377–382 Hilbert space method for the numerical solution of reactor physics problems, *R. T. Ackroyd*  
383–388 Neutron spectra, *R. J. Brissenden*  
389–394 Nuclear data for fission reactors, *A. Michaudon*  
395–402 The role of the neutron in controlled thermonuclear fusion, *V. S. Crocker, T. D. Beynon and L. J. Baker*

Section 6: Radiation effects

- 403–410 Radiation damage, *M. W. Thompson*  
411–416 Atomic processes occurring during irradiation damage by neutrons, *R. S. Nelson*  
417–422 Radiation damage effects in fast reactor design and performance, *J. F. W. Bishop*  
423–428 Radiation effects in fuel materials for fission reactors, *Hj. Matzke*  
429–433 The use of sink strengths in the theory of radiation damage, *R. Bullough*

Section 7: Applied neutron physics

- 435–446 Uses of neutrons in engineering and technology, *J. Walker*  
447–450 Neutron radiography – accomplishments and potential, *J. P. Barton*  
451–456 Neutron applications in the applied earth sciences, *C. G. Clayton*  
457–462 Laboratory neutrons – a breakthrough in non-nuclear disciplines, *R. E. Jervis*  
463–468 Neutron techniques in safeguards, *M. S. Zucker*

Section 8: Medical

- 469–478 Neutrons in medicine, *J. F. Fowler*  
479–484 Neutron radiobiology: dependence of the relative biological effectiveness on neutron energy, dose and biological response, *G. W. Barendsen*  
485–490 In vivo activation analysis in medicine, *R. Boddy*

Section 9: Sources

- 491–496 Neutron sources, future plans and possibilities, *G. A. Bartholomew*  
497–502 The IBR-2 reactor as a pulsed neutron source for scientific research, *I. M. Frank et al*

Section 10: Nuclear power

- 503–512 Neutrons and nuclear power, *W. Marshall*

Section 11: Nuclear weapons

- 513–520 The neutron and nuclear weapons, *R. L. Garwin*
